UPPER SUPPLY

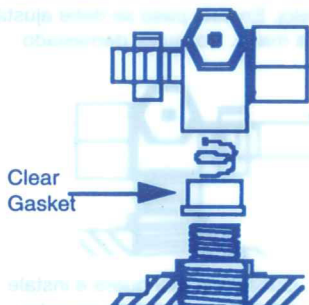

BU100505-K

Always turn water off and flush toilet before making any changes. Use only simple hand tools. The upper supply depicted may differ from the actual one on your unit.

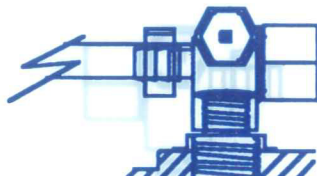

1. Cut hose as close to the hose barb as possible

2. Remove the upper supply, turning by hand in a counter clockwise direction. If there is a small clear gasket left on the threaded part on the top of the unit this must be removed at this time.

3. Install new upper supply by turning in a clockwise direction. This step should be hand tight only. Do not overtighten

4. Attach hose and install clamp as shown using channel locks or pliers. This completes the installation process.

Refer to the owners service manual for additional service instructions.
